

# Welcome to K6/MC

## Mathematics

This semester in Mathematics some of us have been learning about place value. We have learnt how ones, tens and hundreds are organised into groups. This makes it easier to identify what we want to add and subtract, multiply or divide.

We have also been learning to solve word based maths problems by identifying the important information, asking what it is we need to solve, performing the calculation and then writing our answer as a sentence ensuring we identify what we are measuring.

## Gardening

We have had the opportunity to go out into the garden and plant some seedlings. Mr Peter from the Sydney Botanical Garden visited our school and showed us a thing or two about what plants need to thrive.

## Literacy

This semester some of us studied the English Unit—Storm Boy.

This is the story of a boy who adopts an orphaned pelican. We were able to make some good connections with other novels we have studied such as Blueback and August and Jones. All of these stories shared a common theme of friendship. Just like us!
